

Introduction to Complexity Analysis of Non-Recursive Algorithms

Session No.: 6

Course Name: Design and analysis of algorithm

Course Code: R1UC407B

Instructor Name: Mili Dhar

Duration: 50 Min.

Date of Conduction of Class:

Review of the key concepts

1. Complexity Analysis
2. Types of Complexity
3. Analyzing Non-Recursive Algorithms

Q: Time complexity to find the second largest element in an array?

Learning Outcome

Analyze time and space complexity for non-recursive algorithms.

Identify best, worst, and average case scenarios.

Session Outline

1 Complexity Analysis of Non-Recursive Algorithms

2 Reflection learning activity

3 Conclusion and post-session activity

Complexity Analysis of Non-Recursive Algorithms

Activity1

Analysis

Ex. `main()`
 {
 `i = 1;`
 `while (i ≤ n)`
 {
 `i = i + 100;`
 `i = i + 150;`
 `i = i - 150;`
 }
 }

Analysis Ex.

```
main()
{
    while (n > 1)
    {
        n = n / 2;
    }
}
```

Analysis Ex.

```
main()
{
    while (n > 20)
    {
        n = n/20 ;
    }
}
```

Activity 1 (Wooclap)

1

Go to wooclap.com

2

Enter the event code in the top banner

Event code

LPUQSB

Activity 1 (Wooclap)

Analysis Ex.

```
main()
{
    while (n > 1)
    {
        n = n/20 ;
        n = n/3 ;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    i = 1;
    while (i < n)
    {
        i = 2 * i;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    i = 1;
    while (i < n)
    {
        i = 20 * i;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    i = 1;
    while (i < n)
    {
        i = 2 * i;
        i = 5 * i;
    }
}
```

Activity 2 (Wooclap)

2

Enter the event code in the top banner

Event code

LPUQSB

Activity 2 (Wooclap)

Analysis Ex.

```
main()
{
    i = 1;
    while (i < n)
    {
        i = 2 * i;
        i = 5 * i;
        i = 10 * i;
        i = i / 25;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    while(n > 2)
    {
        n = n1/2;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    while(n > 29)
    {
        n = n1/25;
    }
}
```

Activity 2

Analysis Ex.

```
main()
{
    i = 2;
    while(i < n)
    {
        i = i2;
    }
}
```

Activity 2

Analysis

Ex. int main()

```
{  
    p = 1;  
    for (i = 1; i < n; i = 2 * i)  
    {  
        p++;  
    }  
    q = 1;  
    for (j = 1; j < p; j++)  
    {  
        q++;  
    }  
    return q;  
}
```

q-value?

Activity 2

Analysis

Ex. int main()

{ p = 1;

for(i = 1; i ≤ n; i++)

{

for(j = 1; j ≤ n; j = 5*j)

{

p = p + n;

}

}

}

P-value?

Activity 2

Analysis

Ex. main()

```
{ for(i=10; i<n; i=i5)  
  {
```

```
    for(j=n; j>1; j=j/100)  
    {
```

```
        for(k=1; k<n7; k=k+9)  
        {
```

```
            n=y+z;  
        }
```

```
    }
```

```
}
```

```
}
```

```
}
```

T.C?

Activity 2

Analysis

Ex. main()

```
{  
  for(i=1; i≤n; i++)  
  {
```

```
    if(n%i==0)
```

```
    {
```

```
      for(j=1; j≤n; j++)
```

```
      {
```

```
        x=y+z;
```

```
      }
```

```
    }
```

```
  }
```

```
}
```

n is prime no.

Summery

1. Dividing Loops (e.g., $i = i/2$) $\rightarrow O(\log(n))$
2. Multiplicative Loops (e.g., $i = i * k$) $\rightarrow O(\log_k(n))$
3. Convert loop execution counts into summation formulas and simplify.
4. Nested Loops: Multiply complexities of inner and outer loops. **Example: $O(n^2)$**
5. Simple Loops: Run a fixed number of times based on n. **Example: $O(n)$**

Post session activities

Analysis Ex. `main()`

```
{  
    for( $i=1; i \leq n; i++$ )  
    {  
        for( $i=1; i \leq n^2; i++$ )  
        {  
            for( $i=1; i \leq n^3; i++$ )  
            {  
                 $x = y + z;$   
            }  
        }  
    }  
}
```

ETC?

In the next session, Analysis of Recursive Algorithms will be discussed in detail.
